	P313
Molecular Formula:	$C_{10}H_{26}N_4$
M:	202.34 g/mol
CAS:	71-44-3
EINECS:	200-754-2
CS:	29212900
Comment Spermine belongs to the Polyamines. When precipitating selectively DNA with the help of Spermine most of the proteins and triphosphates will not coprecipitate. The precipitation with spermidine is applied after restriction digests, the separation of DNA fragments and triphosphates and the purification of DNA fragments after PAGE. Stock solutions are prepared with a concentration of 100mM (pH 6.8, ref. 2) and stored at +4°C (short-term) or at -20°C (long-term). The working concentration is approx 0.1 mM, if the DNA is dissolved in TE.
