Analytical and Pure Reagents with guaranteed specifications

In ITW Reagents we know how important it is to use reagents of suitable purity and consistent batch to batch. All our products are analyzed according to their specific application and guaranteed by a rigorous quality control in our analytical laboratories.

Our portfolio includes more than 1000 products such as solvents, acids, bases and salts indicated for general analytical applications that need high purity levels and very low content of impurities. The specifications can accomplish international regulations as ISO (International Organization for Standardization), American regulations as ACS (American Chemical Society) and/or can fulfil the requirements indicated in the Pharmacopeias (Ph. Eur. or USP) for the reagents to be used for analytical purposes.

In the following table you will find a selection of reagents for general analytical applications.

For other specific applications please ask for our dedicated brochures: Reagents for HPLC and Spectroscopy, High purity reagents for pesticide residues analysis, Ultra pure reagents for metallic traces analysis, Solutions and Reagents for Volumetric analysis, Analytical Standards, Reagents for wine analysis, etc.

Keep yourself safe and the work area clean using our glass bottles with pouring ring!

For corrosive products, such as acids and bases, we use glass bottles with pouring ring.

The pouring ring prevents from any drop sliding down the outside of the bottle that could destroy the label, the surface area or could harm the user.

Acetone + Bromophenol blue 4.5 mg/l for determination of soap content in oils and fats, code 287184.1214

Soaps are salts of fatty acids obtained from a reaction that occurs between free fatty acids and sodium carbonate. Thanks to their water solubility and insolubility in oil, they can be separated from fat through specific procedures.

Food industries use this technique to lower fat acidity and to enhance its organoleptic characteristics. For such industries, it is important to carry out a chemical analysis for determining the concentration of soaps in oils and fats.

At specific pH values soaps mixed with bromophenol, generate a specific blue colour. Its intensity is directly proportional to the concentration of soaps in the sample.

Fat content determination in Dairy products

During their handling and processing, milk and dairy products are subjected to stringent analytical controls to guarantee their composition and quality. Commission Regulation (EC) No 273/2008, Commission Regulation (EC) No 273/2008 lays down, lays down parameters to determine the reference limits and methods for the chemical, physical and microbiological analysis, and for the organoleptic evaluation of milk and dairy products.

Fat content is one of the most important parameters because:

- This parameter impacts on the price paid per liter of milk.
- It is used to determine if a sample of milk or cheese complies with established legal values.
- It is necessary to know its value to classify the milk for the preparation of derivatives.

There are two typical methods for determining the content of fat in milk and cheese:

Mojonnier method: gravimetric method that uses organic solvents to extract fat. Subsequently the solvent is evaporated and the fat is determined by weighing the dry fatty extract.

Gerber method: volumetric method that uses chemical reagents (sulfuric acid, detergents) to achieve the breaking of the emulsion and the fat separation. Then the fat content is measured in special flask (**butyrometer**).

Product Name	Code	Milk		Cheese	
		Gravimetric method (ISO 1211)	Butyrometer method (Gerber method) (ISO 2446)	Gravimetric method (ISO 1735)	Butyrometer method (Van Gulik method) (ISO 3433)
Ammonia 25% (as NH3) (Reag. USP, Ph. Eur.) for analysis	121129	✓			
Amyl Alcohol according to NF V 04-210 for analysis	125715				✓
Congo Red (C.I. 22120) for analysis	121611	✓			
Diethyl Ether stabilized with ~6 ppm of BHT (Reag. Ph. Eur.) for analysis, ACS, ISO	132770	✓			✓
Ethanol 96% v/v for analysis, ACS	131085	✓			✓
Hydrochloric Acid 25% for analysis, ISO	133378				✓
Isoamyl Alcohol according to Gerber for analysis	121079			✓	
Petroleum Ether 40-60°C for analysis, ACS, ISO	131315	✓			✓
Sulfuric Acid 90-91% according to Gerber for analysis	121010			✓	
Sulfuric Acid 62% (d=1,522) according to Van Gulik for analysis	173253				✓

Packaging symbols:

	Polyethylene bottle
	Glass bottle
	Polypropylene bucket with handle
	Polyethylene canister
	Glass bottle coated with plastic
	Aluminium bottle
	Carton drum with inner polyethylene bag

	Steel-plated drum
	Aluminium bottle with outer packaging
	Glass bottle with outer packaging
	Tin-plated can
	Drum with polyethylene lining inside and metal outside
	Sol-Pack: Polyethylene container in a carton box (cubitainer), with tap

	Glass tube with screw top
	Co-extrusion jerrycan (multilayer)
	Co-extrusion bottle (multilayer)
	Stainless steel drum (returnable)
	Fluorinated polyethylene canister
